TECHNO GURUKUL

COMPLETE APPLIED AI PROGRAM

Applied AI.

A 3.5-month course to understand AI, create with it and build useful AI-powered experiences and workflows.

From first principles to a working portfolio.

01 AI foundations

02 Claude deep dive

03 Generative AI studio

04 AI website creation

05 Automation with AI

06 Agentic AI & development

3.5	9	6	1
MONTHS	MODULES	MILESTONES	CAPSTONE

From first principles to a working portfolio.

Learn how generative AI works. Get fluent with ChatGPT and Claude. Create images, videos, voiceovers, music and web experiences. Then design automations and AI agents using tools such as n8n, Make.com and Claude Code.

TOOLS EXPLORED

Across the program, you'll explore tools such as ChatGPT, Claude, Google Flow, Gemini, Perplexity, HeyGen, Higgsfield, ElevenLabs, Lovable, Emergent and Suno.

THE LEARNING JOURNEY

01

AI foundations

Understand generative AI, language models, prompt design, responsible use and how to get reliable work from ChatGPT and Claude.

02

Claude deep dive

Use Claude for research, long documents, structured work, project context and iterative creation; carry those skills into Claude Code.

03

Generative AI studio

Create campaign concepts, image collections, short videos, voiceovers, original music and songs.

04

AI website creation

Plan, generate, refine, test and present responsive digital experiences.

05

Automation with AI

Connect apps, data and AI using n8n and Make.com; design dependable workflows with review steps.

06

Agentic AI & development

Build practical assistants, knowledge tools, connected workflows and a capstone prototype; use Claude Code in the development process.

TECHNO GURUKUL

9 MODULES

Nine modules. One connected program.

01	AI Foundations	6 SUBTOPICS
02	Claude Deep Dive	6 SUBTOPICS
03	Generative AI Studio	6 SUBTOPICS
04	Image Generation	5 SUBTOPICS
05	Video Generation	5 SUBTOPICS
06	Voice, Music & Song	5 SUBTOPICS
07	Website Creation	6 SUBTOPICS
08	AI Automation	6 SUBTOPICS
09	Agentic AI & Development	8 SUBTOPICS

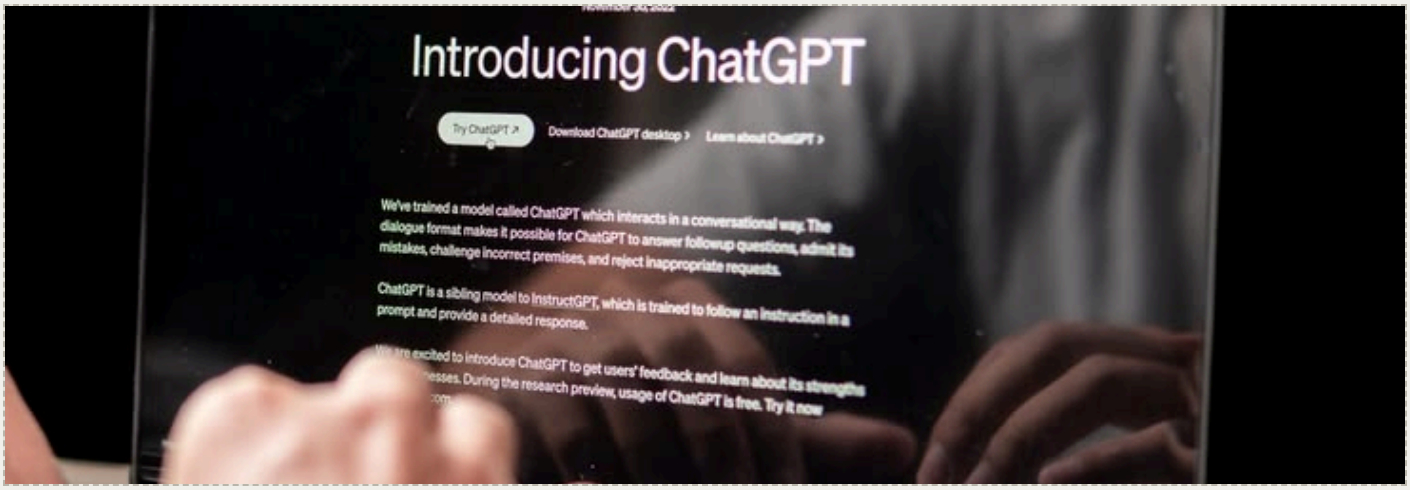

A connected program, not a collection of disconnected tool demos. By the end, learners will know how to choose an AI approach, create a result, connect steps into a workflow and present a tested project.

admission@technogurukul.com

01 AI Foundations

Understand the tools, lead the work

Build a clear mental model of modern AI before relying on it. Learn what these systems can do, where they fail and how to get useful, checkable results.

SUBTOPICS

01 How AI creates

Artificial intelligence, machine learning and generative AI; language models in everyday terms; prompts, context and generated responses; where search, automation and AI assistants differ.

02 Prompting that works

Set a role and goal; give audience, context, constraints and examples; break a large task into steps; request formats and criteria; refine with follow-up prompts.

03 Quality and judgement

Check facts against sources; spot invented details, bias and weak reasoning; compare alternatives; use AI for drafts and analysis while retaining human decisions.

04 Responsible use

Privacy and sensitive data; copyright and attribution; consent and synthetic media; account security; safe handling of files and public-facing outputs.

05 Practical workflows

Use AI to research, plan, summarize, write, analyze supplied material and organize tasks; create reusable prompt templates and a personal workflow library.

06 ChatGPT in practice

Conversation context; drafting and rewriting; exploring files and images when available; structured outputs; choosing the right task and checking the response.

TOOLS EXPLORED

ChatGPT, Claude, Gemini and other current assistants selected for the batch.

BUILD OUTCOME

A personal AI playbook: reusable prompts, a checked research brief, a repeatable work/study workflow and a checklist for safe, reliable AI use.

02 Claude Deep Dive

From capable assistant to build partner

Claude is taught as a core working environment, not a passing product mention. Practise using it across research, planning, creation and development, then connect the experience to Claude Code later in the course.

SUBTOPICS

01 Work with long context

Give Claude a clear brief; organize background information; summarize and question long documents; extract requirements, themes, risks and action items.

02 Projects and repeatable work

Set project instructions and reference material where available; define voice, audience and output rules; build reusable workflows for recurring tasks.

03 Think, compare and structure

Ask for options and trade-offs; create tables, checklists, plans and structured content; request assumptions and uncertainties; review reasoning rather than accept confident wording.

04 Create and iterate

Draft reports, scripts, product ideas, learning plans and content; critique a first draft against a rubric; revise in rounds while preserving the intended voice.

05 Visual and file-based work

Use supported file and image inputs; ask targeted questions; turn source material into useful summaries and outputs; protect confidential information.

06 Handoff to development

Turn a requirement into a brief, acceptance criteria and build plan; ask Claude to explain technical choices; prepare a project for Claude Code.

TOOLS EXPLORED

Claude / Claude.ai and other Claude features available to the cohort; ChatGPT used for comparison and complementary workflows.

BUILD OUTCOME

A Claude-powered project workspace with a reusable instruction set, an analyzed source pack, a polished deliverable and a development-ready product brief.

03 Generative AI Studio

Concepts, content and creative direction

Move from a rough idea to a coherent creative package. Learn the production thinking behind good outputs, not just how to type a prompt.

SUBTOPICS

01 Brief to creative concept

Define audience, purpose, message and format; generate multiple concepts; choose a direction; build a moodboard and style reference.

02 Prompt craft for media

Describe subject, setting, style, composition, lighting, palette, camera or sound; use references and constraints; iterate deliberately and document what changed.

03 AI-assisted writing

Create hooks, campaign angles, scripts, captions, product descriptions and calls to action; maintain a consistent voice; fact-check claims and edit for clarity.

04 Creative quality control

Match output to brief; check consistency and legibility; review brand, accessibility and platform fit; identify artifacts and correct weak results.

05 Creative production workflow

Plan asset lists; version work; manage source files; combine generated material with human editing; package final outputs for a showcase.

06 Portfolio presentation

Explain the brief, creative choices, AI contribution, edits and final use; distinguish concept work from claims about real business results.

TOOLS EXPLORED

ChatGPT, Claude, Canva AI and suitable current image, design and writing tools.

BUILD OUTCOME

A campaign concept pack: creative brief, messaging, script/caption set, visual direction and a presentation-ready case study.

04 Image Generation

Art-direct a visual world

Create visual assets with intention - from a single striking concept to a consistent collection designed for a campaign, brand or story.

SUBTOPICS

01 Image prompting fundamentals

Subject and action; scene and setting; framing and composition; lens and camera language; light, color, texture and visual style.

02 Generate and refine

Text-to-image; reference images; variation and selection; inpainting and edits where supported; background changes; composition correction and upscaling.

03 Consistency across assets

Create style guides and reference boards; maintain recurring subjects, palettes and art direction; produce related assets for a launch or story.

04 Applied visual formats

Product and lifestyle concepts; campaign key visuals; social graphics; thumbnails; poster layouts; presentation visuals; concept frames for a video.

05 Design review

Check anatomy and object details; avoid misleading product depiction; review readable text, crop, contrast and platform size; revise for accuracy and intent.

TOOLS EXPLORED

Examples: ChatGPT image generation, Adobe Firefly, Canva, Ideogram or other tools available to the cohort.

BUILD OUTCOME

A coordinated set of campaign visuals with a style board, selected variations, final crops and a short explanation of the art direction.

05 Video Generation

Turn a story into a finished short

Learn an end-to-end AI video workflow - from concept and shot planning to generated scenes, editing, sound and delivery for the intended platform.

SUBTOPICS

01 Story and pre-production

Choose a format and audience; develop a hook and narrative arc; write a short script; build a shot list, storyboard and visual references.

02 Generate video scenes

Text-to-video and image-to-video workflows; subject and motion direction; camera movement; scene length; transitions; reference-led generation and shot revisions.

03 Continuity and control

Keep characters, products, style and setting coherent; plan shots that can be edited together; identify generation artifacts and replace weak shots.

04 Edit the story

Arrange clips; trim for pace; add titles, captions, voiceover and music; balance audio; make vertical and widescreen versions; export to platform needs.

05 Production practice

Brand/product film; short social video; explainer; mood film or story sequence; review consent, rights and disclosure needs for synthetic people or media.

TOOLS EXPLORED

Examples: Google Flow, Higgsfield, Veo, Runway, Kling and an editor such as CapCut; exact access depends on the batch.

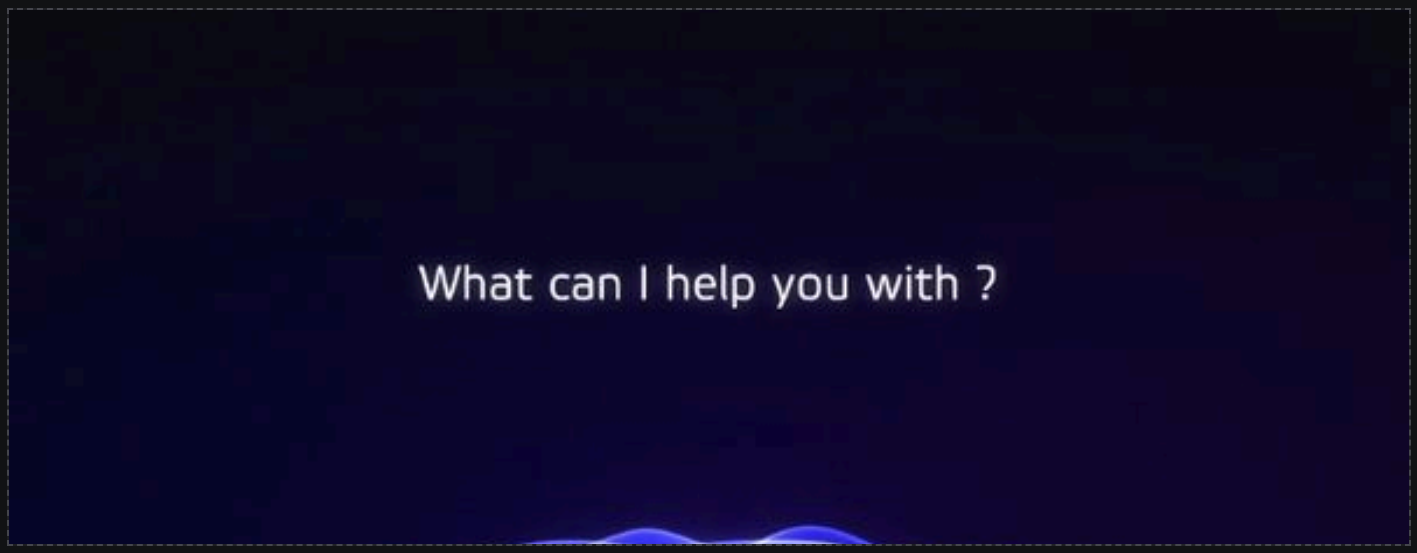

BUILD OUTCOME

A finished short-form video with script, storyboard, generated/edited scenes, captions, sound mix and a second format or cut-down.

06 Voice, Music & Song

Give your ideas a sound

Create an audio identity that supports the message - from clear narration to original music and a complete song concept.

SUBTOPICS

01 Voiceover writing

Write for the ear; structure narration; add pronunciation notes and pauses; adapt tone and pacing for an explainer, promo or story.

02 AI voice production

Generate narration where permitted; select voice and delivery; adjust pacing and emphasis; clean, trim and level audio; align voice to scenes.

03 Music for mood

Describe genre, tempo, instruments, energy and duration; create background beds and stings; fit music to edit points; balance voice and music.

04 Song generation

Build a song brief; develop a theme and original lyrics; select mood, genre and structure; generate and compare versions; revise toward the intended feel.

05 Audio finishing and rights

Review pronunciation and artifacts; mix and export; understand platform and commercial-use terms; obtain consent for voice likeness and avoid impersonation.

TOOLS EXPLORED

Examples: ElevenLabs and comparable voice tools; Suno or other current music-generation tools; an audio editor selected for the batch.

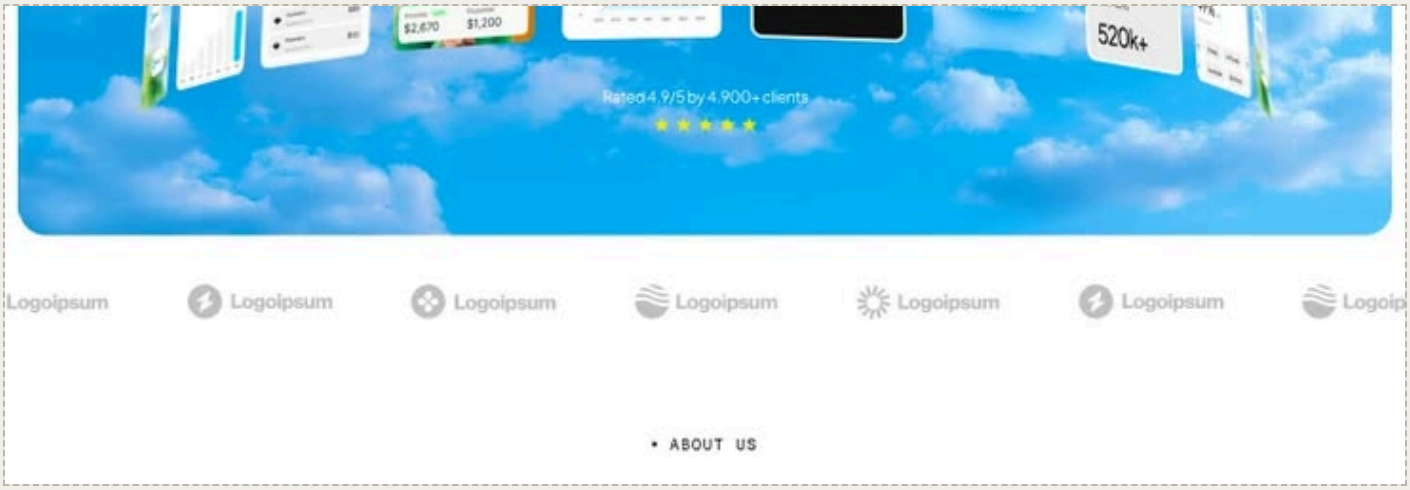

BUILD OUTCOME

A narrated video or audio piece with a generated voiceover, plus an original music bed or song demo and a note on tool and rights checks.

07 Website Creation

From idea to a polished online experience

Plan and produce a responsive website or landing page with AI assistance. Learn to make the experience clear, credible and ready to review before launch.

SUBTOPICS

01 Plan the experience

Define audience and action; clarify the offer; map pages and navigation; create a wireframe; plan a clear journey from first visit to next step.

02 Write and structure content

Create headlines, benefits, proof points, FAQs and calls to action; organize content; check claims; refine language for clarity and trust.

03 Generate the site

Use an AI website builder or coding assistant; select layout and design direction; create sections and reusable components; add images and visual hierarchy.

04 Responsive design and interaction

Review phone, tablet and desktop layouts; navigation; forms; buttons; contrast; spacing; image crops; and key user paths.

05 Launch readiness

Check links and form behavior; page titles and descriptions; basic SEO structure; accessibility essentials; privacy notices where relevant; connect a domain or publish a preview.

06 Iterate from feedback

Run a usability review; identify confusing sections; revise the page; keep a change log; present the design and explain its decisions.

TOOLS EXPLORED

Examples: Framer, Lovable, Replit, Wix or other current builders; Claude and Claude Code for code-assisted planning and iteration.

BUILD OUTCOME

A responsive landing page or multi-section site with a clear offer, working navigation/forms or a reviewed preview, plus a short handover note.

08 AI Automation

Connect tools and make work flow

Turn repetitive steps into visible, testable workflows. Combine clear rules with AI where language, classification or drafting adds value.

SUBTOPICS

01 Workflow thinking

Map trigger, input, actions, conditions and result; distinguish fixed automation from AI judgment; define what can fail and what should stop.

02 n8n foundations

Build node-based workflows; use triggers and app actions; map and transform fields; add branches, filters, loops and reusable sub-workflows.

03 Make.com foundations

Build scenarios; connect modules and apps; map data between steps; use filters, routers and schedules; inspect run history and scenario errors.

04 AI in a workflow

Classify messages; extract structured fields; summarize documents; draft content; route uncertain cases to a person; validate AI output before downstream actions.

05 Connections and reliability

Webhooks and API concepts; authentication and credentials; data formats; retries and error paths; logs; test inputs; duplicate prevention and permissions.

06 Human approval

Add review points before sending messages, changing records or publishing; show the reviewer source information; capture approval and rejection.

TOOLS EXPLORED

n8n and Make.com as primary learning platforms; model APIs and connected apps chosen for available access.

BUILD OUTCOME

Two tested workflow automations, such as form-to-summary and enquiry-to-draft, with sample data, error handling and a human approval step.

09 Agentic AI & Development

Build assistants that can act

Bring the program together. Design a useful AI assistant, connect it to information or tools, build a working prototype and test it responsibly.

SUBTOPICS

01 What makes an agent

Goals, instructions, context, tools and outputs; agent versus chatbot versus automation; single-agent patterns; when a fixed workflow is safer.

02 Design the agent

Define its job and boundaries; write system instructions; select tools; plan state and handoffs; set permissions; decide when it must ask a person.

03 Knowledge assistants

Prepare a document set; organize and retrieve relevant information; answer from provided sources; cite or point to evidence; say when the answer is unsupported.

04 Tool use and connections

Connect approved tools or workflows; pass structured data; validate tool inputs and results; explore MCP/connectors where available; keep credentials secure.

05 Claude for agentic work

Use Claude to shape the agent brief, instructions and test scenarios; explore Claude integrations and tool-use patterns available in the cohort; compare orchestration approaches.

06 Claude Code build lab

Use Claude Code to inspect a project, plan changes, create or edit files, build a small interface or app, run and interpret checks, debug issues and review changes before accepting them.

07 Test and improve

Create normal, edge and adversarial test cases; check factuality and tool behavior; log failures; evaluate quality; add fallback responses and human review.

08 Capstone and presentation

Choose a realistic use case; build a prototype using sample data; demonstrate a complete workflow; explain limits, safeguards and next improvements; present a mock product or service offer.

TOOLS EXPLORED

Claude, Claude Code, n8n, Make.com and selected AI models, APIs and development tools available to the cohort.

BUILD OUTCOME

A demonstrated AI assistant or agentic workflow, test notes, a simple interface or workflow map, a project readme and a portfolio presentation. All practice uses simulated data; consequential actions stay under human control.

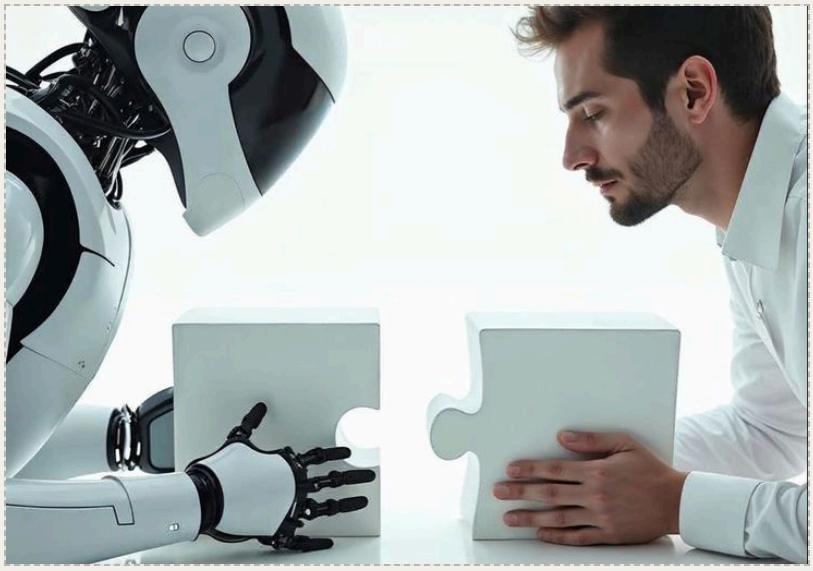

A portfolio built along the way.

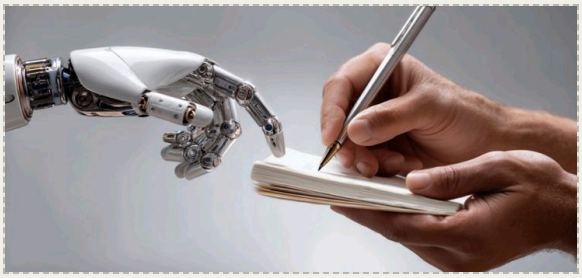

The course is organized around practice briefs. Each major topic moves through a repeatable cycle:

01	02	03	04	05	06
Understand the brief	See a trainer demonstration	Build with guidance	Make an independent version	Review against a checklist	Present what you learned

PORTFOLIO MILESTONES

AI work kit	Prompt library, source-checked research brief and Claude project workspace.
Creative campaign	Original image collection, script/copy pack, short-form video, voiceover and original music/song sample.
Digital experience	Responsive website or landing page with reviewed content and tested paths.
Workflow automations	n8n and Make.com examples with error handling and human approval.
AI assistant prototype	Knowledge or task assistant built with an appropriate workflow and development approach.
Final demonstration	Capstone walkthrough, project documentation and mock product/service pitch.

Real-world briefs. People in control.

01

Use real-world style briefs while working with sample or simulated data.

02

Build outputs that can be shown in a portfolio: media, pages, workflows and a working prototype.

03

Learn how to check AI work, protect information and keep people in control of high-impact actions.

04

Practice explaining the problem, the solution, the tools used and what still needs human judgement.

Tools and subscription availability can change. The instructor will select current platforms for the cohort and teach transferable workflows so learners can adapt as tools evolve. Practice projects use sample or simulated information.
